SUBSCRIPTIONS

THE COURIER is published by the Women's Board of the Hospital to tell the story of medical programs of the George Washington University. Persons may assist in this purpose as sustaining subscribers at \$1.00 for one year and \$2.75 for three years. Checks payable to The Courier should be mailed to the Board treasurer, Mrs. Meredith P. Crawford, 4526 High Street, Chevy Chase 15, Maryland.

COUNTRY M.D.

Almost any afternoon of the week you can see Dr. L. Huntley Cate climb behind the wheel of her 1953 jeep. At her side, carrying a “Horse and Buggy Medical Kit Satchel” filled with the latest pharmaceutical preparations, will be Ruth Marmaduke, a registered nurse. The residents of Brightwood, Virginia, know they are both off to make house calls.

Dr. Cate never intended to practice medicine in a rural area when she was graduated from The George Washington University School of Medicine in 1935. After working her way through GWU’s undergraduate school at night and completing her M.D. degree and internship, Dr. Cate became the University’s first campus physician. In 1938 she established a private practice on Washington’s busy Connecticut Avenue.

All this changed on a rainy Monday morning in April 1953 when Dr. Cate and her nurse and close friend, “Marm,” moved to the small community of Brightwood, 80 miles south of Washington. Miss Marmaduke met Dr. Cate when Dr. Cate was completing her internship and Miss Marmaduke was the head nurse of the third floor of the old H Street hospital.

In making the move, Dr. Cate became the town’s first and only doctor. Brightwood initially came to Dr. Cate’s attention in 1942. She visited a quiet guest home in the town on the recommendation of friends.

As she explains it, “Over the years the beauty of the area grew on me. But even more important, I was struck with the need for medical care in the area. After 10 years of visiting Brightwood, I had a Washington architect design an office-home overlooking the surrounding country.”

The day before Dr. Cate officially opened her practice, she got a call from a man in an obscure area outside of town. His father needed immediate medical attention. It was at that moment that the “Cate House-Finding Method” was born. Although she had toured the area surrounding Brightwood during her many visits, the location of this particular home was unfamiliar. She instructed her caller to hang white rags on the trees leading to his house beginning at a point she knew. Until she became thoroughly acquainted with the backwoods, the white rags on trees and mail boxes led Dr. Cate to the sick and dying.

“It was a little strange practicing in a rural area after so many years in Washington,” Dr. Cate admits. “The first big difference was not being

Photographed by Harold J. Flecknoe

able to use hospital facilities as easily. In Washington, I could send a patient to GW Hospital for X-rays and other diagnostic tests. Many emergency cases were taken to the hospital too. Now I have to do most of that myself. Brightwood doesn't have a hospital. I prepared for some of the problems by spending a week in the emergency room of a large hospital before moving here. But even so, I can remember the time I had with my first breech delivery."

Dr. Cate can also recall the time she crossed a pasture to a farm house and saw a bull tearing at the ground with his hind leg. Fortunately the bull remained where he was. "That's a situation I didn't face on Connecticut Avenue," Dr. Cate assures her present patients.

There are other activities that distinguish Dr. Cate's present medical life from her former one. For the most part she practiced internal medicine in Washington. Today her activities run the gamut of medicine. In addition to being one of three medical examiners for Madison County, she operates the Well-baby Clinic for the State Department of Health in nearby Madison and performs the physical examinations on the local high school athletes.

"Our days are pretty busy around here," says Dr. Cate. "Marm' and I are up at seven to feed Speckles and Patrick, our riding horses. By 7:30 we're eating breakfast. Barring any emergencies, I sit at my desk in the kitchen keeping up with the medical literature from eight to ten in the morning. We have office hours ten till noon. After lunch we go out on house

Dr. Cate makes daily visits to backwoods homes outside Brightwood. After a rain, she has to walk on boards to cross the mud. She enjoys making calls to the Southern-style mansions, such as the one pictured at the right, near Madison, Va. Getting to her patients often requires driving through the woods in her jeep.

She sees patients at the Well-baby Clinic.

Dr. Cate cares for the old grandmother . . . and the young mother.

calls until four in the afternoon. Supper is usually at five around here. We start up at 6:30 again with office hours. They usually last until 9:30 or ten. We keep this kind of schedule six days and four nights a week. During the month I also attend a variety of medical meetings on Tuesday evenings. This doesn't leave much time for missing the fast pace of Washington."

One person who spent a weekday with Dr. Cate remarked, "You haven't seen anything until you've seen that slight five-foot, three-inch woman helping a large truck driver with a bad leg into her office. She's remarkable. She runs instead of walks. She hops fences. She moves around more quickly than almost anyone in the class of '35 that I know."

"I guess I'll retire one of these days," says Dr. Cate in one of her quieter moments. "There's plenty of this country that I'd still love to see."

The day that Dr. Cate ever decides to retire will be a sad one in Brightwood. In the 11 years she has been away from Washington, Dr. Cate has become an intimate part of that community's way of life.

Not all of her calls are medical. Here she visits with an old friend in his mountain home.

Dr. Cate meets emergencies.

She gives complete physical examinations.

Reading X-rays she has taken is part of her day.

During a quiet moment, Dr. Cate and Miss Marmaduke discuss a patient.

One of her favorite places for meeting old friends is Mike Utz's General Store in Brightwood (opposite page).

Each one of these happy-looking children was successfully operated on for some defect. The girl on the left had open heart surgery to correct an atrial septal defect. The young boy next to her had a portion of the small bowel removed because of a congenital anomaly. The next young girl had a malignant tumor of the kidney successfully removed. And finally, the young girl on the right had high blood pressure from coarctation of the aorta (narrowing of the artery) which required excision and rejoining the blood vessel. Each one of these children was returned to a healthy life.

Pediatric Surgery

Intensive training and instruction in pediatric surgery will be available for the first time in the Washington, D. C., area in the near future. This advance in training will be offered by The George Washington University School of Medicine through close affiliation with Children's Hospital.

This new program is being brought about by the recent appointment of Dr. Judson G. Randolph as associate clinical professor of surgery at GWU and surgeon-in-chief at Children's Hospital. Together with Dean John Parks and Dr. Brian Blades, chairman and Lewis Saltz Professor of the Department of Surgery, plans are being made for the introduction of pediatric surgery as an elective course for students during their clinical training. In addition, surgical residents at GWU will be given an opportunity to gain intensive experience and instruction in the diagnosis and surgical treatment of surgical illnesses which occur to the newborn infant and young child.

This program meets an important need at the University, and in the Washington community. Medical science is only beginning to understand and develop techniques to protect embryos in the uterus. Until this breakthrough takes place many infants will continue to be born with defects of various organs of the body. It is the responsibility of the surgeon to correct many of these defects, some of which are disfiguring, others of which are incompatible with life if not immediately recognized and properly corrected in the first few days of life.

It is interesting to note that some babies undergo general anesthesia and major surgery at a few hours of age. Premature babies weighing as little as

one and a half pounds have been saved by surgical operations and correction of some inborn defect.

One distressing congenital malformation of the newborn concerns the facial disfigurement associated with cleft lip and palate. Much progress has been attained in the past 25 years in achieving normal or near normal appearance. Operations can now be performed on babies with cleft lip at two to six weeks of age. Speech disorders associated with cleft palate are now responding to modern surgical techniques using some of the newly available plastic materials.

Other conditions which are peculiar to children are receiving the continued study and interest of pediatricians and pediatric surgeons. Great strides have been made in the correction of congenital heart lesions. Many of the children with heart defects do not become clinically manifest until a few years of life. There are about 20,000 infants a year born in the United

Comes to Washington

States with congenital disorders. A large number of children can be returned to full health by surgically correcting such cardiac abnormalities.

With increasing knowledge of malignant disease in all age groups, much progress in treating childhood cancer has been made. As in adults, children can harbor a malignant growth capable of spreading through their body and causing death. Yet through a combination of X-ray therapy, definitive surgery and treatment with certain chemical preparations, life hope has been offered and in many cases complete cure where only a few years ago death was certain.

The great medical horizon of transplantation of organs from one person to another brings into focus many previously unsolved pediatric problems. The hope that children born with parts absent or defective can have them surgically transplanted is an exciting possibility in the foreseeable future.

It may seem initially that the training required for general surgery would be sufficient for operating on a child or a newborn as well as an adult. However, the special conditions which the surgeon may encounter and the management of these tiny subjects during the hazardous hours after surgery demand special techniques and knowledge on the part of the surgeon as well as the physician, the radiologist and the nursing personnel.

The purpose of the new program is as follows: to establish residency training in pediatric surgery, to pursue the laboratory investigation of certain surgical problems of the pediatric patient and to provide excellent clinical care of infants and young children who require surgery.

Mrs. Smith's book

Mrs. Smith Thinks Young

Mrs. Smith

Ruth Newburn Smith does most of her writing behind an American Chippendale desk which dates back to 1780. Although her fiddleback maple desk is old, it inspires Mrs. Smith to think young.

Last year she revised her book, "The ABCs of Prenatal Care," and had her 60th article published in a national magazine.

Her book, which was revised with the help of Dr. Robert H. Barter, professor and chairman of the Department of Obstetrics and Gynecology at GWU, now has a distribution of four million. Copies can be found in physicians' offices, prenatal clinics, expectant parents' classes, nursing schools and elsewhere. Mrs. Smith wrote the book for Heinz Baby Foods.

How does the wife of Carleton D. Smith, an RCA vice president; the mother of two grown children; a member of The George Washington University Hospital Women's Board and the Prevention of Blindness Society Board and a director of the National Symphony Orchestra come to write a book and articles on children? "I write about what I know best," replies Mrs. Smith.

Mrs. Smith, a graduate of The George Washington University, began her writing career as an advertising copywriter in a Washington department store. After the birth of her two sons, she resorted to writing an advertising column at home. This led to a job in an advertising agency when her children were older. She later became editor of Baby Talk Magazine.

Her first article related to children was sold to Today's Woman almost 17 years ago. It was on a subject she knew best and she called it "I'd Rather Have Boys." This was followed by articles for Better Homes and Gardens and Pageant magazines. Perhaps her most controversial piece appeared in Coronet. After her son, who was in college at the time, came down with mononucleosis, she wrote an article for the magazine entitled, "The Kissing

Disease." Her most recent article appeared in Parent's Magazine and dealt with "Your Baby's Five Senses and How They Develop."

When Mrs. Smith began her free-lancing career, she also wrote on topics other than child development—such as income tax, an article prompted by an error she made in completing her tax return. In recent years, primarily because of her experience with Baby Talk magazine, she has specialized in writing about the young.

A reporter referred to Mrs. Smith as "a highly informed and informative writer on infant care and child development." This reputation is undoubtedly due to the current subjects she deals with. In her book she covers "Expectant Father's Food," "Rooming In," "The RH Factor" and radioactive material in milk.

Perhaps her greatest challenge, says Mrs. Smith, is finding new ways to present basically the same subjects to the changing audience of new mothers. Mrs. Smith certainly has met this challenge with 60 nationally published articles to her credit.

Our Peripatetic Professor

Speaking engagements are commonplace to members of the faculty, but Dr. Brian Blades' series of lectures this past Winter was a bit unusual. Dr. Blades, Lewis Saltz Professor of Surgery and chairman of the department, traveled more than 40,000 miles in a month's time to speak to military personnel at Air Force hospitals in the Far East. During his 10,000 mile-a-week schedule, Dr. Blades spoke in Hawaii, Japan, Okinawa and The Philippines. His trip was sponsored by the U.S. Air Force through the Office of the Surgeon General. He spoke in the capacity of a consultant in thoracic surgery.

Dr. Sadusk Named FDA Medical Director

Dr. Joseph F. Sadusk, chairman and professor of The George Washington University Department of Preventive Medicine and Community Health and director of the University Hospital Clinics, was recently named to the position of Medical Director of the Food and Drug Administration.

The position, effective April 1, had been vacant since September 1962. The FDA has had difficulty in filling the directorship because of the highly controversial decisions that the director is expected to consider. Among Dr. Sadusk's many responsibilities will be the control of licenses for new drugs.

Dr. Sadusk was considered ideal for the position because of his extensive experience in teaching, hospital work and government work. His faculty positions date back to 1937; his first hospital appointment was made in 1940. From 1945 to 1949, he was Executive Director of the Committee on Medical Sciences, Research and Development Board, under the Secretary of Defense. He also helped organize the Employees Health Service of the Prudential Insurance Company. Dr. Sadusk has more than 75 contributions to medical journals and medical text books to his credit in the fields of biochemistry, infectious diseases, antisyphilitic therapy, viral and rickettsial diseases and medicolegal problems, dating back to 1932.

Dean John Parks announced that Dr. Sadusk would continue his academic affiliation with the School of Medicine as Professor of the Department of Preventive Medicine and Community Health.

GROUND BROKEN FOR EUGENE MEYER PAVILION

Groundbreaking ceremonies for the new Eugene Meyer Pavilion of the University Hospital took place May 11. Representatives of the Federal Government, the District of Columbia and the Metropolitan Washington area joined the University in the groundbreaking activities. The Summer issue of the COURIER will be devoted to the ceremonies and the pavilion.
