December 2016

Deciding on what journal you should publish in can be difficult and time consuming. Promoted as an alternative to [Journal Impact Factor](#), [CiteScore](#) is a new tool by [Elsevier](#) available within the [Scopus](#) database to help measure the impact factor of a journal. [CiteScore](#) is meant to be a simple yet comprehensive metric that will help researchers better understand the citation performance of a journal. Easy-to-use filters allow you to refine your search to your preferred subject area and/or subcategory as well as search for a specific journal to discover its impact. The metric covers over 22,000 journals including 330 discipline areas. Its' user-friendly interface can help you quickly compare journals within a field and ultimately assist in the decision process of where to publish your article.
