Part of the Library and Information Science Commons, and the Medicine and Health Sciences Commons
Journal Issues Needed for Binding

The Himmelfarb Library and the Hospital Reading Room continue to suffer from theft and mutilation of journals. These materials are purchased to support the research, education and patient care needs of Medical Center personnel and are, therefore, resources the library holds in trust for all patrons to use on a basis of equal access to information. During July and August $136.58 worth of current journal issues were removed without authorization from the Himmelfarb Library. The library staff sincerely regrets the inconvenience caused by a few thoughtless individuals and requests the assistance of our patrons in filling the gaps in the journal collection.

The following is a list of journal issues that are missing and are needed to complete volumes for binding. The library staff will appreciate donations of these issues in order to maintain the integrity of the journal collection. Donations may be mailed to the Serials Department or delivered in person to any member of the Reference or Serials Departments in the library.

American Journal of Digestive Diseases - Vol. 20, no. 1, 1975
American Journal of Human Genetics - Vol. 28, no. 2, 1976
Anatomical Record - Vol. 186, no. 4, 1976
Archives of Sexual Behavior - Vol. 5, no. 2, 1976
Aviation, Space and Environmental Medicine - Vol. 43, no. 6, 1976
British Journal of Surgery - Vol. 63, no. 7, 1976
Infection and Immunity - Vol. 13, no. 2, 1976
Israel Journal of Medical Sciences - Vol. 11, no. 7, 1975
Journal of Child Psychology and Psychiatry - Vol. 16, no. 1, 1975
Journal of Nuclear Medicine - Vol. 17, no. 1, 1976
Medical Aspects of Human Sexuality - Vol. 10, nos. 9 and 10, 1976
Nature - Vol. 263, no. 5574, 1976
Neurology - Vol. 20, no. 1, 1976
New Scientist - Vol. 73, no. 1045, 1977
Nursing - Vol. 6, no. 2, 1976
Oncology - Vol. 32, nos. 3 and 4, 1975
Postgraduate Medical Journal - Vol. 52, Supplement #4, 1976
Resident and Staff Physician - Vol. 22, no. 2, 1976
Tissue Antigens - Vol. 7, no. 5, 1976
Virginia Medical Monthly - Vol. 103, no. 8, 1976
AV Purchases National Geographic Film

The AV Study Center has purchased the National Geographic film Man: The Incredible Machine. Incorporating a variety of photographic methods the motion pictures in the film reveal the actual design and workings of the human body. Highlights of the 28 minute, color film include X-ray motion pictures of the skeleton and joints, infrared thermogram patterns emitted from different parts of the body and film taken by an endoscopic camera as it passes through the lungs into the bloodstream. Through the camera’s microscopic lens we see red cells pass through capillaries, a leukocyte cell devour a red cell and we pass through the chambers of the heart. This film was shown during Freshman orientation and we invite those of you who missed it, or those who want to see it again, to visit AV to view these spectacular scenes of the human body at work.

Videotape Program on Auscultation

Newly acquired by the AV Study Center is the multi-media learning program Auscultation and the Normal Heart produced by Medi-Cine Ltd. of London, England. The producer recommends that users read the guide book before viewing the fifteen minute color videotape. The videotape displays a diagrammatic section of the heart simultaneously with pressure curves and sound notation. The cardiac cycle is shown in slow-motion so the viewer can identify the relationship between the movement of the heart valves, heart sounds and pressure changes. An audioscassette which includes listening exercises is the final part of the program. Twenty-four slides taken from the videotape and study guide are included for teaching purposes. The call number for this set is RC 76.3 VT126 1976.

Major Donation To Book Fund

A check for $10,000 was received last month from the Paul and Annette Himmelfarb Foundation, Inc. of Washington, D.C. to provide additional support for the purchase of books and journals. Paul H. Himmelfarb's initial gift to the George Washington University was the spark that set in motion a building program that resulted in the present GWU Medical Center, and the Himmelfarb Library building. In memory of this most generous philanthropist, books purchased from this fund will carry a special book plate.

Serials Information

The Serials Information Window on the first floor of the library was closed as part of the first floor remodeling and the implementation of the PHILSOM Periodicals Print-Out. The Serials Department has moved into Room 103. Questions concerning the serials and bindery functions of the library will be answered at the Reference Desk located in the new Reference Alcove on the first floor.

Personnel Changes

Mary Margaret Cherrington has accepted a faculty position of Reference Librarian at the Albany Medical Center, Schaffer Library of the Health Sciences. Ms. Cherrington has been at the Himmelfarb Library as the Reference Assistant since September 1974 and Acting Head of the Inter-library Loan Department during 1976-77. In her new position, Ms. Cherrington will share responsibility for Medical Reference, On-line Services, and Audio-Visuals.

Progress Report - MeSH Conversion

The conversion of the subject catalog to MeSH is well underway, with approximately 40 per cent of the subject cards moved into place behind the new guidecards. While the transition is being completed we will maintain parallel subject catalogs, with the old and the new (MeSH) side by side so that all materials will remain accessible by subject.

Two new aids have been placed on the table near the card catalog: a copy of MeSH with all terms used in the catalog highlighted in yellow; and Permutated MeSH, which takes each significant word that appears in any MeSH term and lists all the terms in which that word appears. A reference librarian will be glad to assist you in their use.
Recent MEDLINE Topics

The selected MEDLINE computer-based bibliography topics below can be repeated, modified, or expanded. This list does not include all computer-based bibliographic searches of the past two months, but is indicative of the variety of topics successfully run on the MEDLINE database, which includes the years 1975-77. Request forms are available from the Reference Desk.

Staff Activities

During September, the Director, Mrs. Nina W. Matheson, traveled to Europe to attend several library meetings. She was appointed a member of the organizing committee for the formation of a Special Libraries Section in the International Federation of Library Associations (IFLA) which met and celebrated its 50th anniversary in Brussels, Belgium from Sept. 3-9, 1977. The Medical Section of the Library Association of Great Britain held its business meeting and program in Bath, England, from September 9-12, 1977. At this meeting, Mrs. Matheson met many English colleagues. The use of MEDLINE and other on-line services is far less than in the U.S., although their document delivery system is more rapid and reliable. The Association Internationale du Bibliophile met in Athens, Greece. Mrs. Matheson was able to observe the work in the National Library of Greece, the Parliamentary Library, and the renowned Gennadius Library of the American School in Athens as well as visit several outstanding individual private libraries.

On October 13 and 14 Shelley Bader, Head, AV Study Center participated in a workshop on Management by Objectives for Librarians sponsored by the Librarians' Technical Committee of the Metropolitan Washington Council of Governments.
Staff Activities, cont.

John Patruno, Head of Serials has accepted an invitation to serve a one-year term on the PHILSOM Advisory Panel of Serials Librarians. The panel is charged with reviewing the present operations of the PHILSOM system and recommending changes to improve bibliographic control of problem serial titles so that the information needs of library patrons can be met more effectively.

The ISI Lecturer Program: A Pragmatic Approach to Teaching Students About Information Services - by Eugene Garfield, Ph.D.*

Earlier this year I discussed how an ISI survey had discovered a surprising lack of awareness of Current Contents among many graduate students. This is symptomatic of a more general and widespread problem in science education: a shortage of effective programs to teach students about the availability and use of information tools.

Most faculty members and librarians readily agree that students need considerable information retrieval skills in order to pursue careers in science. In my opinion, the inability to convert this conviction to effective instructional programs stems largely from jurisdictional confusion. The "subject" content of most courses is the responsibility of the science faculty, while information tools are in the librarian's domain. Unfortunately, the twain never seem to meet. The questions of who should teach science students about the information tools they will need and how, where, and when this instruction should be given are largely unresolved.

Most professors have their hands full just getting through their course subject material in a semester. Since most faculty members have no formal training in the use of information tools, they are hesitant to instruct others about them. Librarians do try to help, but their time is limited. Even a well designed library tour at the beginning of a semester is not much help to a student who comes up against a real search problem two months later.

Some independent efforts to correct this situation have come to my attention. In a class given by W.R. Klemm of Texas A&M University, each student is given an older publication on a topic in physiology and told to trace in the Science Citation Index the articles which have cited the older paper, articles which cited those articles, and so forth. They then write abstracts of the articles which cited those articles, and so forth. They then write abstracts of the articles they find. According to Dr. Klemm, the class members feel that at the same time they are learning about physiology and gaining an understanding of the impact of earlier research on more recent work, they are also learning how to use an important reference tool.

S.M. Plaut of the University of Maryland School of Medicine conducts seminars in research methodology that give students hands-on experience with various information services, including Current Contents and the Science Citation Index. The seminars are mandatory for certain students in child psychiatry, behavioral pediatrics, school health, and adolescent medicine and are elective for medical students, faculty, and residents. Plaut points out that once they have seen Current Contents, almost all of the seminar participants ask to be put on the routing list for it.

A systematic approach to students literature searches was recently described by John MacGregor and Raymond G. McInnis of the Wilson Library, Western Washington State College. In addition to discussing the efficient use of encyclopedias, reviews of research, citation indexes, abstracts, and card catalogs, their approach to teaching library research provides students with a general understanding of constructing bibliographic networks.

At the University of Arizona, all graduate students in the Department of Plant Pathology are routinely included on the routing list for Current Contents, according to Stanley M. Alcorn and Linda White. Further, all graduate students are encouraged to enroll in a for-credit course called "Information Sources for Agricultural Scientists." The course, which meets once a week, is designed to "orient students to current, standard science and government reference tools and to new computer-based information systems which are accessing scientific and technical information." Dr. White was kind enough to send me the course outline, and I was so impressed with
its balanced and comprehensive approach that I have reproduced it here (see p.7) as a
guide for others who may wish to start
Unfortunately, creative programs like those
mentioned are the exception, not the rule.
So while continuing to do its part to encour-
age a more general awareness of informa-
tion tools and resources, ISI has also insti-
tuted a program that can provide some
immediate, specific help. In late 1975, we
created a new position which we called the
ISI Educational Lecturer. This was in
addition to our field representatives, who
are also competent lecturers. Originally,
the Educational Lecturer's responsibility was
to instruct library and information sciences
students in the uses of ISI services. At the
time, we believed that the most pressing
need was to make sure that future librarians
would know how to use our services when
students and faculty asked about them, or
when they were confronted by search ques-
tions which our services could handle effec-
tively. We felt this was necessary because
we know that even a few of the "better"
library schools hardly gave lip service to the
ISI product line - even though most of our
services are now regarded a "standard" by
experienced librarians and researchers.

Continuing feedback indicates that our
initial thinking was correct. Later on,
however, we realized that instructional help
was needed in science classrooms as well as
in library schools. If students don't even
know that the Science Citation Index exists,
they aren't likely to ask questions about it.
So at the start of 1977, we broadened the
scope of the ISI lecturer's responsibilities to
include instructions for science students,
and we increased the number of available
lecturers. We now have two full-time
lecturers, with a third soon to be added.

Diane Hoffman, our lecturer for the United
States and Canada, has been with the pro-
gram since its beginning. A graduate of
Syracuse University Library School, she
served for seven years as a reference
librarian, first at Syracuse and then at the
State University of New York at Oswego.
Karen Sandler, our lecturer in Europe, is a
graduate of the Imperial College of Science
and Technology at the University of London,
and formerly an information officer at
Beecham Medical Centre. Ms. Sandler's
lectures are currently limited to the United
Kingdom, Ireland, The Netherlands, and
Scandinavia.

ISI lecturers tailor their presentations to
fit the needs of the students to whom they
are talking. They are prepared to speak on
the theory of citation indexing, how to use
the Science Citation Index and Social
Sciences Citation Index, how to assemble
an ASCA profile, and the specific applica-
tions of our indexes in different subject
areas, as well as the use of citation
analysis in collection management and de-
velopment. They can also answer students'
questions about when and how to use other
types of ISI services, such as Current
Abstracts of Chemistry, Index Chemicus,
and Chemical Substructure Index. The
lecturers select and distribute appropriate
printed literature for each audience, and
usually include audio-visual aids in their
presentations.

Lecturers are provided without charge. If
you are interested in scheduling an ISI
Educational Lecturer for the fall semester,
write Ms. Hoffman at ISI in Philadelphia or
Ms. Sandler at our European office.

The ISI lecturer program will not com-
pletely solve the problem of teaching
science students about information tools.
But when you consider that ISI lecturers
and marketing representatives deliver al-
most 1,000 lectures each year, we think
that we have taken steps in the right
direction. However, our efforts cannot
succeed without the help of concerned
faculty members. If you teach a science
course, I hope you will see that your
students get the information they need
about information tools.

Faculty and Staff Publications

The Himmelfarb Library staff is interested in maintaining its collection of Medical Center faculty and staff publications for inclusion in future issues of Interface. Please help by notifying us of your current or forthcoming publications, including monographs, journal articles, abstracts, book reviews and audiovisual materials by calling Cathy Lyle, X3527. In addition, two copies of each publication are requested by the Special Collections Department at the University Library. For further information about Special Collections, call Annette Steiner, X7497.

AUDIO-VISUAL

(Single titles are listed under RADIOLOGY)

Sadler, Alfred Mitchell.
EMERGENCY MEDICAL CARE : THE NEGLECTED PUBLIC
SERVICE : THE CONNECTICUT EXPERIENCE.
RA 645.6 .C852 1977

ENDOCRINOLOGY AND METABOLISM

CONGENITAL ADRENAL HYPERPLASIA.
Edited by Peter A. Lee.
RJ 420 .A366 1975

DISORDERS OF CARBOHYDRATE METABOLISM EXCLUDING
DIABETES.
K.G.M.M. Alberti, guest editor.
(Shelved under Clinics in Endocrinology and
Metabolism; v.5, no.3)

Dorner, Gunter.
HORMONES AND BRAIN DIFFERENTIATION.
RC 877 .D63 1976

ENDOCRINOLOGY OF PREGNANCY.
Edited by Fritz Fuchs, Arnold Klopper. 2nd ed.
RG 558 .E5 1976

Kline, Milton V.
OBESITY : ETIOLOGY, TREATMENT, AND MANAGEMENT.
RC 628 .K63 1976

METABOLISM AND THE RESPONSE TO INJURY.
Edited by A.W. Wilkinson and Sir David Cuthbertson.
RD 93 .M4 1976

Ninth Congress of the International Diabetes
Federation. New Delhi, India, 1976.
CURRENT TOPICS IN DIABETES : ABSTRACTS, IX
CONGRESS OF THE INTERNATIONAL DIABETES FEDER-
ATION, NEW DELHI, INDIA, OCTOBER 31-NOVEMBER
5, 1976.
Edited by J.S. Bajaj. (Shelved under Interna-
tional Congress Series, no. 400)

PATHOGENESIS OF METABOLIC ALKALOSIS. (Videotape).
Academy of Health Sciences.
RC 630 .VT07 1971

AUDIO-VISUAL

Schulster, Dennis.
MOLECULAR ENDOCRINOLOGY OF THE STEROID HORMONES.
OP 572 .S7538 1976

GASTROENTEROLOGY

PATHOLOGY OF THE GASTRO-INTESTINAL TRACT.
Editor, B. C. Morson. (Shelved under Current
Topics in Pathology; v. 63)

GENETICS

GENETIC MANIPULATION AS IT AFFECTS THE CANCER
PROBLEM.
Edited by J. Schultz, Z. Brada.
RC 268.57 .S64 1977

Maclean, Norman.
CONTROL OF GENE EXPRESSION.
QH 434 .M3 1976

HEMATOLOGY

Caen, Jacques.
PLATELETS : PHYSIOLOGY AND PATHOLOGY.
RC 647 .B5C32 1977

AN INTRODUCTION TO THE MORPHOLOGY OF THE CELLULAR
ELEMENTS OF THE BLOOD. (Slide set)
Thomas F. Necheles.
RB 145 .SL187 1975

AUDIO-VISUAL

HEMATOLOGY : NORMAL MORPHOLOGY : A VISUAL APPROACH.
(Slide set) G. Adolph Ackerman.
RB 145 .SL 190 1973
