Are you starting a systematic review? We have a new tool that can help to streamline the process.

Covidence is a web-based program that takes the citations you've collected and organizes them for screening and data extraction. Once you've created a Covidence account, you can add citations and invite reviewers. As you work through the stages of your systematic review, Covidence will help you assign reviewers for the title/abstract and full-text screenings, keep track of how many citations have been reviewed, and identify those citations where the reviewers' opinions differed. Once you have your final set of articles, Covidence will guide you in creating and populating the data extraction and risk of bias forms. Covidence also tracks the disposition of each article to make creating your PRISMA flowchart exceptionally easy.

There is no limit to the number of reviews you can create in Covidence, and our license covers not just faculty but also student use. For more information on how to sign up for an account as part of Himmelfarb Library's subscription, or to learn more about how Covidence works, take a look at the Himmelfarb Library's [Guide to Covidence](#).

If you have questions about Covidence, please contact the Himmelfarb Library's Reference Desk at himmelfarb@gwu.edu or (202) 994-2850.
