

**Central Lines Module Pilot Data (N=4)**

**Knowledge Data:**

Average pre-test score: 65%

Average post-test score: 92.5%

**Satisfaction Data:**

Scale: 4= Strongly Agree      3=Agree      2=Disagree      1=Strongly Disagree

This learning activity met the stated learning objectives	I feel more comfortable caring for patients with central lines.	Material presented in this learning activity is relevant to my practice	I feel more comfortable counseling patients and families after viewing this module	I feel more comfortable teaching trainees about this topic after viewing the module	I will change my clinical practice after viewing this module	What did you like best about this module?	What did you have concerns about?	Additional Comments
4	4	4	4	4	4	all of it	nothing	
4	3	4	3	4	3	It was very easy to follow and had great instructions	What does "clamp ABOVE" the line means? You should detail what that vs proximal vs distal to the break in the line means in the module to avoid confusion.	
4	1	4	4	4	1	short and to the point	none	already follow this practice
3	3	4	4	3	3	good overview	exact location of clamping central line when broken (line orientation is not clear proximal/distal/above/below)
